# All factor pairs: four-group reuse rates | D pairs: 32 starts; other pairs: 8 starts

Left factor x right factor: Low x Low, Low x High, High x Low, High x High

Columns: alpha=0.1 / node | alpha=0.1 / edge | alpha=0.01 / node | alpha=0.01 / edge

Rows: D x H (32 starts) | D x O (32 starts) | D x R (32 starts) | H x O (8 starts) | H x R (8 starts) | O x R (8 starts)

Reuse rate [%]

er_mid, ba_mid, amazon, vldb, slashdot, enron

Low: at or below the cut per start/type/pair. High: above the cut. High R means more recent access.
Each bar: reuse within the next 100 accesses; access counts are pooled across starts.
